

ABSTRAK

Tujuan penelitian ini untuk mengetahui hubungan produksi teh dan ekspor teh terhadap pertumbuhan ekonomi. Jenis data time series diperoleh dari publikasi BPS sejak tahun 1990 hingga 2021. Metode analisis data menggunakan pendekatan *Vector Autoregression* (VAR). Hasil penelitian dengan pendekatan VAR di peroleh bahwa jumlah produksi memiliki hubungan positif namun tidak signifikan terhadap pertumbuhan ekonomi, dan ekspor teh memiliki hubungan positif namun tidak signifikan terhadap pertumbuhan ekonomi Indonesia.

Kata Kunci : *Pertumbuhan Ekonomi, Jumlah Produksi Teh, Ekspor Teh*

ABSTRACT

Tea plantations are one of the commodity plantation products that make a major contribution to the economy, export development is one of the driving forces for economic growth, this is because an increase in exports can spur an increase in the economy. The purpose of this study was to determine the relationship between tea production and tea exports on economic growth. The type of time series data was obtained from BPS publications from 1990 to 2021. The data analysis method uses the Vector Autoregression (VAR) approach. The results of research using the VAR approach found that the amount of production has a positive but not significant relationship to economic growth, and tea exports have a positive but not significant relationship to Indonesia's economic growth.

Keywords: *Economic Growth, Total Tea Production, Tea Exports*
