

ABSTRACT

PKH is a conditional social assistance program for Beneficiary Families (KPM) who are designated as PKH beneficiary families. PKH provides cash assistance to the poor who are obliged to follow the requirements set by the program, namely sending their children to education units, and carrying out routine visits to health facilities for children aged 0 to 6 years, pregnant women and postpartum mothers. However, the provision of PKH social assistance to the Lhokseumawe City Social Service was still not optimal, because at the time of selecting beneficiaries there was no supporting system so that at the time the selection process was still using estimates and there were no calculations at the time of selecting beneficiaries. So that many residents protest because they should get help but they don't get it. This study aims to create a decision support system in providing PKH social assistance using the WASPAS method, there are 5 criteria used, namely work, income, housing conditions, number of dependents, and personal assets. To help determine the eligibility of recipients of PKH assistance, a decision support system is needed. With this decision support system, it is expected to be able to minimize the occurrence of misdirected targets that often arise in the selection process. From the system, the names that are entitled to receive are obtained according to the ranking order : Azmi Harahap, Kania Sari, Khana Sultan, Rafif Putra, Riki Areksa, Deni Fahrozi, Kirana Dewi, Rafi Surya, Sunarjo, Kudani, Fatir, Safrudin, Bima Satria
