

## **ABSTRAK**

Andika Syahputra. Identification of Marine Debris at Bluka Teubai Beach, Dewantara District, North Aceh Regency. Supervised by Mr Yudho Andika, S. Kel., M.Si and Mr. Imamshadiqin, S.Pi., M.Si. Bluka Teubai Beach has natural charm in the form of a wide expanse of brownish white sand. The presence of this waste is a new threat that has a negative impact on marine ecosystems and the socio-economic sustainability of society. The aim of this research is to determine the type and density of marine debris at Bluka Teubai Beach, Dewantara District, North Aceh Regency. This research was conducted using the Purposive Sampling method. This research uses descriptive data analysis with results showing that the waste found at Bluka Teubai Beach, Dewantara District, North Aceh Regency consists of 3 types of organic waste, namely wood, bamboo, coconut shells, while inorganic waste is plastic, glass, metal and rubber.
